Subject: Possible inaccuracy in Authentication landing page

From [here](#). I don't think this is true (yet):

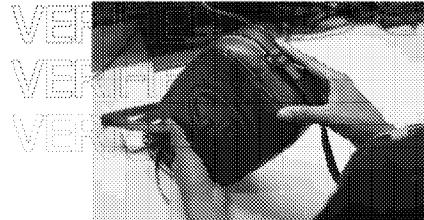

Trust The Process

Our global team of expert authenticators uses a rigorous, multi-step verification procedure that includes the following checkpoints:

Condition

We only allow deadstock on our marketplace. That means every item bought or sold must be brand new and never worn.

Construction

With checklists of 100+ data points, our authenticators are better equipped than anyone to ensure a product's authenticity.

Packaging

Equally important as the product itself, our team ensures packaging meets the highest safety standards to deliver a brand new product.

Accessories

From the full list of accessories to all the additional add-ons, rest assured that your purchase on StockX will match any rated purchase experience.

Advanced Technology

We use machine learning to aid our authenticators in catching every minor detail.

Quality Assurance

A final check in our authentication pipeline, our QA experts ensure nothing slips through the cracks.

My understanding is that we don't proactively QA the Authenticators decisions unless the Authenticators fail something.
